

PIYUSH KUMAR

Operations & Project Coordination | AI-Augmented Workflows

+91-7048941184 | piyushbaskar4@gmail.com | Faridabad, Haryana | [LinkedIn](#) | [GitHub](#)

PROFILE SUMMARY

Detail-oriented B.Tech Computer Science Engineer (2026) with demonstrated experience managing end-to-end project pipelines, cross-functional coordination, and data-driven reporting. Proven ability to build structured workflows, maintain trackers and documentation, and leverage AI tools (ChatGPT, Claude) and automation to optimise operations. Thrives in fast-paced environments with strong ownership, follow-through, and analytical problem-solving. Eager to bring operational rigour and tech-savviness to alt.f coworking's dynamic, startup-pace team.

CORE COMPETENCIES

Project & Task Management: End-to-end pipeline execution, task tracking, deadline management, SOP creation

Coordination & Communication: Cross-team coordination, vendor follow-ups, stakeholder reporting, documentation

AI Tools & Automation: ChatGPT, Claude AI, prompt engineering, workflow automation, process optimisation

Data & Reporting: Google Sheets, dashboard maintenance, execution reports, tracker management, SQL

Research & Analysis: Market research, competitor analysis, operational research, data-driven insights

Technical Stack: Python, REST APIs, Django/Flask, MySQL, Git, Jupyter Notebook, AWS, Zoho CRM

KEY STRENGTHS · WHY ALT.F

Ownership Mindset: Independently built and shipped 4 end-to-end projects from ideation to deployment — no handholding, full accountability.

Attention to Detail: Validated model outputs against precision/recall/F1 benchmarks; documented all workflows and debugging guides during internship.

Analytical Mindset: Designed ML pipelines and data dashboards that converted raw datasets (10,000+ records) into structured, actionable reports.

AI & Automation Proficiency: Actively uses ChatGPT and Claude AI for research, documentation drafting, and workflow optimisation; experienced with automation via Python scripting.

Fast-paced Adaptability: Managed multiple concurrent projects across varied tech stacks while meeting academic commitments — comfortable with ambiguity and shifting priorities.

PROJECTS

Smart Agriculture System — End-to-End Project Execution | Python, Flask, Scikit-learn, REST API, Documentation 2025

- Owned full project lifecycle — from requirements scoping and data sourcing (10,000+ records) to model deployment and API documentation.
- Maintained structured execution logs and version-controlled codebase; wrote SOPs for data preprocessing and model evaluation workflows.
- Coordinated testing and validation phases independently, tracking accuracy benchmarks (91% classification) against defined success criteria.
- Deployed final solution as a live REST API — ensuring reliable, stakeholder-ready output with clear usage documentation.

Real-Time Weather Data Pipeline & Dashboard | Python, REST API, Google Sheets-style dashboards, Visualisation 2024

- Built an automated data pipeline consuming live external APIs, cleaning inconsistent JSON responses, and populating structured reporting dashboards.
- Designed 7-day forecast visualisation dashboards with trend lines and anomaly indicators — directly comparable to operational trackers and execution reports.

- Managed data quality checks and transformation logic end-to-end, ensuring downstream dashboards were always accurate and up-to-date.

Ray Voice Assistant — Workflow Automation & NLP | Python, NLP, Speech Recognition, Task Automation 2024

- Designed and deployed an automation workflow handling 15+ command categories, reducing manual task execution time by 60%.
- Documented intent classification logic and command mappings in structured SOPs; maintained performance logs tracking 88% command accuracy.
- Identified and resolved misclassification patterns through systematic analysis — demonstrating iterative, data-backed process improvement.

Object Detection System — Research, Annotation & Evaluation | YOLOv8, Python, Dataset Management, Performance Reporting 2025

- Led end-to-end project coordination: dataset collection, manual annotation of 3,000+ images, training pipeline management, and results reporting.
- Produced detailed performance evaluation reports using IoU, precision, and recall metrics — structured for stakeholder review.
- Optimised processing pipeline through systematic benchmarking, achieving under 30ms inference — tracked via structured performance logs.

WORK EXPERIENCE

Technical Support Engineer Intern VAAN Infra, Faridabad — 2024

- Managed a weekly queue of 20+ technical issues — tracking status, follow-ups, and closures using structured ticketing workflows.
- Coordinated with engineering teams and vendors to identify root causes of production failures, cutting average resolution time by 25%.
- Created and maintained internal documentation (troubleshooting guides, issue trackers, runbooks) used across the support team.
- Conducted operational analysis of recurring failure patterns to proactively surface systemic issues before escalation.

EDUCATION

B.Tech in Computer Science Engineering 2022 – 2026

Satyug Darshan Institute of Engineering & Technology, Faridabad, Haryana

CERTIFICATIONS & TOOLS

- AWS Academy Cloud Foundations – Amazon Web Services
- Google Cloud Study Jams – Generative AI – Google Cloud
- Problem Solving (Basic) – HackerRank
- Active user of ChatGPT, Claude AI — applied to research, documentation, and workflow automation tasks

LANGUAGES

English (Fluent) | Hindi (Fluent)
